Expectations influence Knowledge and Perception

Physics teacher always starts her class by performing some experiments, today when she perform experiment in a closed container by dropping feather and hammer at the same time. According to our expectations hammer should drop first it was not hammer, the result was opposite. This result reflects how we perceive things according to our expectations instead of critical thinking and evidence. As it is in our Education system we should focus on ^{boosting} ~~enhancing~~ ~~improving~~, ~~enriching~~, critical thinking of a student and provide proper evidence instead of memorizing the curriculum. We perceive what we want. If one thing is giving benefit to us it does not mean it will provide benefit to everyone. One statement can have multiple meaning but it depends how we perceive it. Education and research should be based on ^{experiments} ~~expectations~~.

This problem should be highlighted in local newspaper health column or extra information section.

Comprehension Paragraph

Q1 How does the author trace the evolution of

According to author intelligence means wisdom, observation and experiments that start with the industrial age when human makes progress through his skills by inventing technology and made the work easy. Today, intelligence means fast response to unlimited questions without deep understanding.

Q2 What danger does

According to author, in valuing speed above reflection means this digital intelligence affects our mentality we just scroll without pausing on one thing. True intelligence may take some time to understand the main idea and then response. But digital intelligence gives answer within a second.

Q3 According to author?

Now people become dependent on technology for their knowledge which is harmful for their mentality and affect ~~over~~ their ability of critical thinking, reasoning and knowledge.

Q4 What Kind of Intelligence?

In order to protect our future generation from harmful effects of AI when must utilize our mental capabilities, taking time to understand things and then react according to what we perceive instead of dependent on intelligence for fast response and zero mental efforts.
