

TEST SERIES ONE

①

ENGLISH PRECIS AND COMPOSITION:

- **PRECIS:** ^{MIND} Title: HUMAN AND THE
SCIENCE PARADOX

A physics teacher starts her class with different experiments. Last tuesday, she used a hammer and a feather to demonstrate gravitational force. Naturally, the hammer would fall first, but to student's awe, she used vacuum, changing the whole dynamics of the research. This experiment reveals the limitations of human mind and half formed ideas, perceptions developed from empirical knowledge often falls short under scrutiny. These perceptions and half formed ideas are the result of our educational system, students once curious for now know now thrives on rote validation, which perhaps is the reason for decline in curiosity.
