

Question 3: Comprehension

1- Timothy Dexter's rivals tired of his success, advised him to ship coal to ~~new~~ New Castle. They thought they would ~~him~~ humiliate him, and expected it would be ridiculous step from him, but his destiny had other plans for him. What was considered to be a joke became one of his greatest success.

2- When Dexter's reached England, a miner's strike had stopped local production creating a sudden shortage. Dexter sold his entire cargo to him. Consequently, he earned a massive profit for his trade.

3- Through this event, author says that this is not only the luck of Timothy Dexter's but sometimes intelligence also proof to be beneficial. For instance, Dexter's shipping of cats towards West India's, earned

him a massive profit.

4- Dexter's life became a living reminder that sometimes being taunted and humiliated becomes the best weapon to be successful in life. Sometimes, your rivals and enemies give the best advice that later proves to be the optimistic turning point of life.

5- From the way Timothy Dexter's rivals reacted to his achievements, it can be inferred that human perception of "foolishness" and "genius" is based on bias, expectations and social status rather than by actual results or insights.

Correct any five sentences.

Q:7 Translate into English:

If any Urdu Professor claimed that he ~~can~~ understand the Ghalib's Kalam and can elucidate the environment by conversation on literature, no doubt he is showing his intellectual capabilities, but if demanded from him to say a poetry like Ghalib then he would be speechless. Because understanding and creations are two separate worlds. Mind created understanding, while creation is the divine result. Superiority blessed to Ghalib not merely the reading and hardwork but uncertain intelligeny, feeling and was result of divine blessing.

That's the reason his poetry influence the hearts even after centuries the same way as it was in the past.

Q:2 Preci's:

Title: The paradox of Green Energy
Renewable energy is often celebrated as humanity's moral and environmental salvation, yet beneath its idealistic image lies a troubling contradiction. The production of solar panels, wind turbines, and electric vehicles depends on destructive mining of rare-earth minerals and metals, causing severe ecological harm in poorer regions. Electric vehicles batteries emit high energy carbon during production, that are difficult to recycle, add to electronic wastes likewise, wind and solar farms, though clean in operation, generate

toxic and non-recycleable waste while still relying on fossil fuels for construction and maintenance.

Thus, the green revolution marked as sustainable program, perpetuates another cycle of exploitation and environmental degradation.
