QUESTION No 02.

Question 1:

✓ Answer: The evolution of the concept of intelligence has ranged from being observant and reflective to someone who is quick and adapts fastly. The new era is more about speed while the era before that was slow where intelligence stemmed from experience and depth of understanding. The concept of intelligence has become equivalent to speed and swiftness. The world has moved from reflective to acceleration and speed in a matter of few centuries

2

QUESTION 2:

2

Answer: The biggest danger of valuing speed over time is loosing the sense of understanding and depth. The modern age is blatantly relying on speed while ignoring the need of thinking and reflecting. The search for essential is being diminished at an alarming rate.

✓

The need for wisdom and acquiring knowledge is disappearing as the ease of everything being under our finger tips is taking over. The ability to pause is under danger.

QUESTION NO 3.

✓

Answer: While machines have made lives easier, it has also made the concept of knowledge and wisdom distant to mankind.

2

The swift nature of these new-age machines ^{has} ~~have~~ overshadowed the ability to reflect, learn and think deeply. Today's man knows everything but understands nothing because the swiftness has suppressed the ability to pause and think.

QUESTION 4:

✓ **Answer:** The intelligence that revolves around slow, clear and independent thinking is the need of the hour and shall be the most valuable in the future.

2

Anybody who understands the meaning and nature behind the facts and situations will be valuable and hold more importance than the one who knows the most facts and processes the most data.

QUESTION No 01

Title: The Aspiration for Stability ✓
in an Uncertain World. 1

→ The landing of feather before the hammer is an old phenomenon that has always preplexed the human mind. Half-formed ideas create a home in the minds of people unless confronted with evidence challenging them. → The society teaches to seek the right and forget the better. In this way, natural curiosity starts to

disappear. Medical studies are
one of the examples of this. It
 keeps the human mind on edge
 making them forget that
 science is an ever-evolving
 subject. Humans are wired to
 feel unsafe in an environment
 involving constant uncertainty
 and continuous shift.
