

Technological Advancements and their role in poverty reduction Outline

1- Introduction:

- a- Hook
- b- Definition
- c- Thesis Statement: Technological advancement, if used effectively, can be a powerful tool to eradicate poverty by improving education, healthcare, governance, and economic systems.

2- Modern Technological Advancements Driving Poverty Reduction:

- a- Providing Digital Finance Services to Reduce Poverty.

Case Study. M-Pesa in Kenya allowed people to deposit, send, and withdraw money, especially women and rural entrepreneurs, lifting around 2% of Kenyan households out of extreme poverty.

b- Boosting Agriculture with Technology.
Case Study: Indian farmers, using advanced technology, receive real-time updates on market prices and weather. Over 4 million farmers in 35,000 villages have benefited.

c- Improving Education with Digital Tools.

Case Study: Pakistan's Virtual University offers online degree programs, while TeleSchool initiative provided education to millions during COVID-19.

d- Advancing Health Services Digitally.

Case Study: Sehat Kahani in Pakistan, a female-led telemedicine, connects doctors with patients through video consultation and has provided over 2.6 million consultations nationwide.

e- Harnessing Renewable Energy

Case Study: Bangladesh's Solar Home System Project installed over 4 million solar home systems, providing electricity to 18 million rural citizens and creating over 100,000 green jobs.

f- Creating Opportunities through E-Commerce.
Case Study: Alibaba's Rural Taobao trained rural villagers in e-commerce and opened over 30,000 service centers by 2020.

3 Challenges and Limitations of Technology in Poverty Reduction:

a- Digital Divide and Unequal Access to Technology.

b- Job Displacement and Technological Unemployment.

c- Low Digital Literacy and Technological Awareness

d- Cybersecurity and Data Privacy Risks.

Case Study: Aadhaar Data Leak in India.

e- Urban-Rural Disparities in Digital Development.

f- Technological Dependency and Loss of Traditional Skills.

4 Conclusion:

Introduction:

Mohammad Yunus, a Bangladeshi economist, ~~used~~ technology to provide small loans to rural women. His Grameen Bank initiative empowered millions to start businesses, lifting them out of poverty. He was awarded the Nobel Peace Prize in 2006. GrameenPhone initiative further expanded access to technology. Yunus' story showcases the potential of technology and microfinance in poverty reduction. In the current era, technology stands as one of the most significant forces shaping human development. From digital banking to artificial intelligence, modern innovations have revolutionized how people work, learn, communicate, and access essential services. The intersection of technology and poverty reduction represents a turning point in human development. Technological advancement, if applied inclusively, can be a powerful tool to eradicate poverty by improving education, healthcare, governance, and economic systems. Yet, this potential can only be realized when the digital divide, low literacy, job displacement,

digital disparities are bridged, ensuring equitable access to technological benefits for all.
