

1. For a 5-mark part, aim to write at least 2 and at most 3 sides of the answer sheet. Often, a question has two or three parts, and the marks are divided accordingly - so address each part fairly.
2. Manage your time wisely - you have about 35 minutes per full question, which comes down to around 8 minutes for each 5-mark part. Stick to this to avoid rushing later.
3. Make your answers look scientific. Use flowcharts and diagrams wherever they add clarity.
4. Neatness matters - keep your handwriting clear, avoid cutting or overwriting.
5. Mind your spelling and grammar - while GSA doesn't deduct marks for these, your expression leaves an impression.
6. In the ability portion, explain analytical ability questions in words. For a 5-mark question show all steps and provide clear explanations.

Here's a brief key/sample of your Ability questions

Part II

Question No. 3

Q.6

a) Candy ratio problem

Given: Packets in flavors Apple - Berry - Date = 3 : 6 : 5

Asked: If Apple candies exceed Date candies by 35, how many candies are there?

Note (consistency check): The ratio shows Apple = 3 parts and Date = 5 parts, so Date is larger than Apple in the ratio. The statement "Apple candies exceed Date candies by 35" contradicts the ratio (Apple cannot exceed Date if ratio is 3:5). Two ways to handle this:

1. If the problem truly intends Apple - Date = 35, that's impossible with the given ratio (would require negative common factor).

2. Most likely the intended meaning is Date exceeds Apple by 35 (i.e. Date - Apple = 35). We have the correct ratio.

Formula: Let common factor = k . Apple = $3k$, Date = $5k$.
So $5k - 3k = 35 \Rightarrow 2k = 35$

Solution: $2k = 35 \Rightarrow k = 35 \div 2 = 17.5$.
Berry = $6k = 6 \times 17.5 = 105$.

Answer: 105 Berry candies.
(If you intended the other wording exactly as written, note that it is inconsistent with the ratio.)

b) Camera discount + tax

Given: Original price = \$200. Discount = 25% off. After discount, 6% tax applied.

Asked: Total amount paid.

Formula / Steps:
Discount amount = 25% of 200 = 0.25×200 .
Sale price = $200 - \text{discount}$.
Tax = 6% of sale price.
Total = sale price + tax.

Solution (digit by digit):
Discount = $200 \times 0.25 = 50$.
Sale price = $200 - 50 = 150$.
Tax = $150 \times 0.06 = 9$.
Total paid = $150 + 9 = 159$.

Answer: \$159.00

c) Bicycle travel time

Given: Distance = 36 km, speed = 18 km/h. Started at 1:00 PM.

Asked: Arrival time.

Formula: Time = Distance $\div$ Speed

Solution: Time = $36 \div 18 = 2$ hours. Started at 1:00 PM, so arrived at 3:00 PM.

Answer: 3:00 PM

d) Unscramble math terms

i. STATISTICS
ii. GAMBLER

Q7.

Given:

- Diameter (d) = 14 cm
- Radius (r) = $d/2 = 14/2 = 7$ cm
- $\pi = 22/7$

Asked: volume of sphere

Formula:

Volume = $(4/3)\pi r^3$

Now, let's plug in the values:

Volume = $(4/3) \times (22/7) \times (7)^3$
= $(4/3) \times 22 \times 7 \times 7$
= 1437.33 cm^3

Answer:

The volume of the sphere is approximately 1437.33 cm^3 .

(b) Five friends' savings (total Rs. 25,000; ratio 1:2:3:4:5).

Given: Total = Rs. 25,000. Ratio = 1 : 2 : 3 : 4 : 5.

Asked: Smallest share (the "1" part).

Formula: Sum of ratio parts = $1+2+3+4+5 = 15$. Smallest = $(1/15) \times \text{total}$

a. Why cells form organelles
Discuss mitochondria in a Human Cell.

Purpose of the Organelles

What are Organelles?

Organelles are the tiny cell organs present inside it. They are so tiny that they cannot be seen with naked eyes. Microscope is used to observe the structure and function of these tiny organs. Further, different organelles perform different function inside the cell.

Why are they formed?

Cells form organelles because it requires them to survive. Cell, like human, is nothing without its organs. For instance, ribosome carries genetic information, nucleus controls the activity of cell and so on.

DATE: _____

DAY: _____

Other key purpose behind the organelles formation are as follow

- 1- Each organelle is dedicated to a distinct task.
- 2- Organelles maintain an optimal environment within the cell.
- 3- They protect the cell from harmful reactions and toxic substances.
- 4- Folded organelles such as mitochondria increases surface area of the cell.

Mitochondria

Mitochondria are an important part of the cell. They are present in different sizes and at different location. Mitochondria are referred to as the Power House of the cell. It is because they manufacture and supply energy to the cell.

DATE: _____

DAY: _____

Function of Mitochondria

- Metabolic Processes
- Energy Formation
- Energy supply

(b) What is Doping?
Discuss Different types
of Semiconductors.

1- Doping

Doping is the process of adding impurity atoms to the semiconductor. This process is used to enhance the capacity of the semiconductor to conduct electric charge. For this purpose, Electron-Deficient atoms such as Aluminum which has 3 electrons in its outermost shell is used. Similarly, Electron-Rich atoms such as Phosphorus which have 5 electrons are used to add into the semiconductor.

2- Types of Semiconductors

There are two types of semiconductors;

- N-Type of semiconductor
- P-Type Semiconductor

DATE: _____

DAY: _____

2.1 N-Type Semiconductor

It is such type of semiconductor in which an electron (e^-) rich impurity is added. Electron-rich impurity such as Phosphorus is added to replace some of the silicon atoms. It then starts bondings with the neighboring silicon atoms.

Four electrons of Phosphorus make bonds with four silicon atoms, leaving one atom loosely bonded to phosphorus. This freely moving electron carries charge, hence increases conductivity. Because these electrons have negative charge, thus such type of conductors are referred to as Negative-Charge Carrier or N-Type semiconductors.

2.2 P-Type Semiconductor

To make this type of conductor, electron-deficient atoms are added into the silicon crystal such as Aluminum. The three Al electrons make bonds with the three electrons of silicon. However, one electron of silicon is left

DATE: _____

Day: _____

free, creating a Hole. This Hole has a positive charge and other electrons start jumping to fill this hole, making holes at their own place. Thus, due to the positive charge of the hole, it is referred to as the Positive or P-type semiconductor.

C- State some merits and demerits of Volcanic eruption.

Merits of Volcanic eruption

- ①- Volcanic ash and weathered lava are rich in minerals like potassium and phosphorus, creating most fertile agricultural soil on Earth.
- ②- Volcanic possesses concentrate valuable metallic minerals, including gold, silver and copper.
- ③- Eruption add new rocks to the earth's surface, creating new islands like Hawaii.

DATE: _____

DAY: _____

Demerits of Volcanic eruption

- ① - Eruption releases large quantities of poisonous gases, having adverse health effects.
- ② - Eruption can also cause acid rain as gases from volcanoes mixes with atmosphere.
- ③ - It can also lead to secondary hazards such as earthquakes and tsunamis.
