PART- II(Subjective portion)TIEP:

The hidden cost  
of Green  
Revolution

Precis:

Renewable energy is  
widely regarded as moral  
and sustainable alternative

to fossil fuels. However, beneath this appealing image lies another story of exploitation and environmental harm. The production of solar panels, wind turbines, and electrical vehicles, batteries demands large quantities of rare earth metals such as lithium and cobalt. Their mining damages landscapes, polluted water, and exploits poor communities. Manufacturing these components also release harmful emissions, while their disposal creates serious waste and recycling problems. Although renewable promise clean power, their life cycle depends upon fossil fuels and produce waste that cannot be managed. modernity lies in call for systemic moderation rather than

repeating same pattern  
of industrial greed under  
a new label. W. T.?
