Title : Conventional attitude of Human beings 0

Precis

The commencement of a physics class is demonstrated by dropping something from height. The student's pattern of thinking shakes in case of dropping hammer and feather in vacuum chamber. This reveals the ^{fallacious} basis on which human mind always works. The thoughts of mostly people are engraved by solid beliefs regarding something. The vacuum chamber's case signals that easily accepted truths sometimes confront crumbling situation. The conventional mind upbringing of students keep ^{them} away ~~them~~ from actual progress. This eventually break into results in which adults are unable to question certainty. The problems arise

due to controversial headings of published medical studies. The actual problems lies that how knowledge progress. The nature of science is ^{being} changable due to constant conduction of researches. The public remains unaware of this change. They consider the established facts cannot be modified. A religious person does not show the courage to accept the modified recommendation in health section of newspaper. For human nature, it is impossible to advocate uncertainty in world while being besieged by conventional thoughts.

Question No 2

Comprehension

(1)

✓

As per author, intelligence interpreted differently in different eras. For centuries, criteria of intelligence was observation, experience and moral reasoning. ^{Then} while in industrial era, intelligence was measured by one's ability to calculate, plan and execute. While in today's world, someone is considered intelligent on the basis of speed of response instead of depth of thoughts.

(2)

0

The danger that the author associates with valuing speed over reflection is confusion in reaction due to misunderstanding. The author signals that due to speedy response a person may look smarter. While on the other side, he may remains?

(3)

1 According to the passage, technology has altered the relationship between knowledge and wisdom. Due to technology, large chunk of information is only one finger away, this actually hampers the power of thinking of a person. Deep thinking is required for right interpretation and connection which are the basis of wisdom.

(4)

1 The author believes that the most valuable intelligence in the future will be based on slow, clear and independent thinking. He thinks that intelligence has to revise its moral grounds otherwise, a generation will produce but zero understanding.
