

Make a **Précis** of the following passage and suggest a suitable title

The Deception of Green Energy

Title: The Hidden Costs of Green Energy

Renewable energy is often seen as humanity's moral solution to the pollution caused by fossil fuels. Politicians and activists present terms like carbon neutrality and net zero as symbols of environmental progress. However, this green revolution hides a serious contradiction.

The production of solar panels, wind turbines, and electric vehicles requires large amounts of rare earth minerals like lithium and cobalt, mined through destructive methods in poor countries.

These activities damage land, poison water, and create new ecological crises.

Electric cars, praised as eco-friendly, actually produce high carbon emissions during battery manufacturing and later add to electronic waste.

The real problem lies in humanity's

moral complicity - turning environmentalism into a brand rather than a genuine

effort to live responsibly. True sustainability needs moderation and humility, not another line

of exploitation in the ~~name~~ ^{name} of progress.

Q(i) 80

Why did Timothy Dexter's rivals advise him to ship coal to Newcastle, and what was the intended outcome of this suggestion?

Answer:

Dexter's rivals advised him to ship coal to ~~Newcastle~~ already famous for its abundant coal supply, making such a business move ~~appear~~ foolish. Their intention was to humiliate him and cause him a financial loss, proving that his previous successes were due to luck rather than intelligence.

Q(ii) 80

what was this unexpected event in England transformed Dexter's apparently foolish coal venture into a profitable success

Answer:

An unexpected miners' strike in Newcastle halted local coal production, creating a temporary shortage. This sudden demand allowed Dexter to sell his entire shipment of coal at a high price, turning what seemed like a

foreign decision into a profitable success.

Q(iii) 80

What does the author imply about the relationship between luck and intelligence in Timothy Dexter's success?

Answer:

The author implies that Dexter's success was a blend of luck and unconventional thinking, rather than formal intelligence. His victories suggest that fortune sometimes favors the bold, and that success in business is not always determined by education or logic, but sometimes by **thinking out of the box** and confidence.

Q(iv) 80

How does Dexter's repeated success in turning mockery into profit challenge conventional ideas about business wisdom and education?

Answer:

Dexter's repeated success challenges the belief that business success requires formal education, strategic planning, or rational decisions. Instead, this story shows that unorthodox thinking, risk-taking, and even being underestimated can lead to unexpected ^{surprise} ~~success~~ ^{success}. His life illustrates that practical luck and timing can sometimes outweight traditional business wisdom.

→ 8(v) 8

What can be inferred about human perception of why Dexter's "foolishness" and "genius" from the rivals reacted to his achievements?

Answer:

It can be inferred that people often confuse unconventional behavior with foolishness, and only recognize genius after success is proven. Dexter's rivals viewed him as a fool because his ideas defied logic, but his repeated victories forced them to reconsider their definitions of intelligence and success. The passage suggests that genius and foolishness may depend on perspective and outcomes.

Translate the following into English, keeping in view the idiomatic / figurative expression

If any urdū professor claims that he fully understands Ghalib's poetry and can speak impressively about its artistic beauty, then surely he is showing his knowledge. But if he is asked to compose a verse like Ghalib's, he will be helpless. The reason is that understanding and creation belong to two different realms. Understanding comes from reasons, while creation is the result of intuition and inspiration. The high status position Ghalib received was not
