

General instructions to be followed to pass essay

Day: _____

- 1- Spend time on rightly comprehension of the topic, you won't pass the essay unless and until you addressed the asked part
- 2- Try to make your main heading in the outline from the words in the question statement
- 3- Try to add hook in the introduction. The length of introduction must be of 2 sides
- 4- your topic sentence in your argument must be aligned with the ending sentence
- 5- Avoid firstly, secondly, thirdly etc. in outline
- 6- add references in your arguments with proper source. Go for diversification of references
- 7- Do not add new idea or point in Conclusion
- 8- You won't pass the essay if make more than 4-5 grammatical mistakes
- 9- outlines that are not self explanatory or does not aligned to with the essay statement are liable to mark 0 and the essay would become null and void
- 10- always try to be relevant to the topic, if even your 1 or 2 arguments are irrelevant, the examiner would not pass your essay.

e) Corruption is a big barrier in disaster management in Pakistan.

f). No research and development on disasters has made it difficult to build a robust disaster management system in Pakistan.

III

How disaster management in Pakistan can be improved:

a) Disaster management can be improved by bringing all political parties on same page.

b). Collaboration with the world on disaster management can be a right step in a right direction.

c). Robust disaster management can be achieved by ensuring

accountability of funds.

d). Investing in research and development can help in to formulate effective policies

e). Use of modern technology will enable Pakistan to make well-informed decisions about disasters.

IV. Conclusion.

"We have not come here by choice, flood took everything from us." These were the words of flood-affected people. These lines show the severity of disasters in Pakistan. Every year a major disaster hits Pakistan with ever increasing scale. However, it is unfortunate that Pakistan is struggling ~~with~~ to formulate a robust disaster management system. There are many challenges in the way of disaster management in Pakistan. Some of them include political disunity, lack of climate-experts, and provincial dis-integration. Furthermore, lack of modern technology, prevalent corruption, and dearth of research and development has made it difficult to have an effective disaster management system. Nevertheless, it is fortunate that Pakistan has still opportunities to

Date: _____

Improve disaster management system. By taking certain measures, the disaster management system can be enhanced. These measures include, uniting all political parties, collaborating with the world, and ~~ensuring~~ ^{investing} in research and development. Moreover, use of modern technology will be the right step in the ~~with~~ right direction. Hopefully, by implementing these measures, Pakistan would be having top-notch quality disaster management system.

Political disunity is the

Political dis-unity is the major challenge in the way of achieving robust disaster management system. Political parties have politicized the natural disasters. They keep on blaming one another for inefficient disaster management system. For example, the recent floods wreaked havoc in the country. Instead of suggesting policies options, the PML-N and PPP started accusing each other of disaster mis-management. Therefore, despite so many years of independence, Pakistan is struggling to make

proper disaster management system.

Moreover, there is lack of environmental experts to guide the country on disaster management issues.

Currently, there is no well-qualified expert of climate in Pakistani government.

Till today, officials are using trial and error methods to cope-up with disasters.

Mushtaq Rehman writes in a dawn newspaper that Pakistan's worsening disaster management is ^{partly} due to ~~the~~ dearth of climate-experts.

This reveals that disaster management is in crisis due to lack of specialized climate experts.

Furthermore, provincial dis-integration is not allowing Pakistan to formulate an

Substantially low argument and blatant statement

You are supposed to provide your own thoughts. Your own thoughts are missing

effective disaster management policies. The people of provinces ~~have~~ are not ready to co-operate with one another for disaster management.

There is a glaring example of this of Sindh - Punjab water controversy. Sindh people have many times rejected offer to make dams to manage water to avoid floods. ~~However~~, hence there has been years, but water management is in doldrums. Therefore, it can be said that owing to provincial-dissimilarity, Pakistan is suffering from compromised disaster management system.

Additionally, no use of modern technology has led to compromised disaster management system. All climate-related used by officials is outdated and

Entrepreneur. Rashid - ur - Rahman, a
AI expert, writes in an article,
revolutionizing Peterstan's
climate disasters, that the world
is shifting to use AI for
climate disasters to predict their
timing and intensity. However,
in Pakistan, predicting systems
are devoid of modern technology.
Therefore, ~~other~~ policies are made
either myopic or mis-calculated.
This shows that no implementation
of AI is causing compromised
disaster management system in
Pakistan.

In addition to this,
~~the prevalent corruption~~
is another big barrier
~~in disaster management in~~
Pakistan. Many a time, funds
~~are allocated for infrastructure~~
~~development and policy making~~
but they are not utilized
properly. ~~IPRT report on~~

Climate chaos ^{reveals} ~~suggests~~ that the ~~growing~~ corruption is systematically weakening already weakened disaster management. Therefore, Pakistan is unable to cope-up with disasters properly. This report of IPPI highlight the severity of the issue that how ~~corruption~~ corruption is affecting disaster management in Pakistan.

Last but not least, there is dearth of research and development on disaster has made it difficult to build a robust disaster management system in Pakistan. Many countries around the world have well structured departments for research on disasters, natural and types. However, in Pakistan, scarcely is any ~~one~~ department except PDMA. Therefore, disasters are becoming frequent but management.

is becoming inefficient. Hence,
~~it can be~~. Umar Riaz writes
in his article, Climatic
catastrophes in Pakistan, that
the suffering disaster management
in Pakistan is because there
is no one to study disasters
but many to condemn it.
This shows that disaster
management is in crisis
due to insufficient research
and development.

However, all is ^{not} in hell.

Disaster management can be
improved by ~~bringing~~ all political
parties on same page. It must
be realized by parties that
natural disasters are common
enemies. Therefore, they require
a united ~~approach~~. All parties
should put forward their issues
and strategies. Then a committee
should formulate disaster
related policies keeping in ^{view} ~~you~~

Substantially low argument

all options. This way a disaster management can be improved.

Moreover, collaboration with the world on disaster management can be a right step in a right direction. Pakistan, currently, is becoming more important to USA and Europe. This opportunity ~~however~~ can be leveraged for climate disaster management.

Shahid - Asad writes in his article, Rising Pakistan and worsening climate, that Pakistan should co-operate with China, Japan and USA for disaster management system. These countries can provide not only technical assistance but also expertise.

Therefore, Pakistan should hunt this opportunity to improve disaster management system.

Furthermore, robust disaster management can be

No analysis at all

Achieved by ~~ensuring~~ investing funds on research and development. The education system should offer subsidized degrees and courses at lower to produce experts. Additionally, Pakistan should also promote importance of expertise of disaster management by giving them social recognition. This is also suggested by Shehryar-Arshed who is climate expert.

Therefore, investment in research and development is paramount for ~~dis~~improving disaster management system.

Furthermore, use of modern technology will enable Pakistan to make well-informed decisions about disasters. The government should leverage technology from other countries to update ~~disaster~~ disaster management system. The example

Bangladesh and India is worth mentioning. In 2010, Bangladesh leveraged modern technology from India to cope-up with the disaster. Today, Bangladesh has made its own technology to manage disaster. Pakistan can follow this same suit and develop disaster management system.

To conclude, disaster management in Pakistan faces many challenges like political dis-unity, dearth of experts and un-availability of modern technology. However, Pakistan has still opportunities to improve its disaster management system. ~~For example~~ these can be ensuring political willingness, collaborating with other countries, and utilizing modern and up-to-date technology. By adopting these ~~and~~ some measures
