Question no.1

(i)

Ans:

Human memory is considered as accomolation of individuals and communal experience which can be enshrined with rituals; emotions and cultural history. It reconstructs the experience of past while highlighting major observation of individuals.

(ii)

Memory is described as selective and reconstructive because algorithm behind memory operates in such a way that it emphasizes some significant moments and then reshapes observation according to current situation. Thus, memory has dual operating system; retrospective and reconstructive.

(iii)

Ans: Collective memory is the shared observations of individuals experiences. These experiences are often shaped by cultural events, ritual ceremonies and traditational norms that integrates a community to understand its past.

(iv)

Ans: Emotion and perspective influence memory differently. Those experiences which recollect the tense or timid scenario are different from normative narratives. Moreover, the moments filled with felicity reinvigorate onself and the moments filled with trouble and shame often lead to escape.

(V)

Memory is considered as inseparable identity because of its reconstructive nature. It recollects the highlights when similar thing is experienced at presence. Moverover, traditional narratives of individuals and society to understand its past make memory implicit identity.
