Title

Specialization and its Impacts on Humanity

The modern reliance on expertise has created a strange contradiction in human's life. With growing specialized knowledge, Humans find themselves unable to solve the basic problems of their lives. They go to economists, scientists and technologists for knowing the particular knowledge of their fields, but they do not realise that being master of one field does not mean to be wise about life. The specialist, has narrow vision of reality, and thus he sees the world with his own specialized perspective. The definition of human being varies from discipline to discipline. Each discipline focuses on one aspect of human's life, while ignoring others, makes humans habitual of treating half truth as the whole truth. This fragmentation of knowledge makes human unable to solve those problems, which are misfit to any discipline. The medieval thinker used to have a unified knowledge of different fields together, which is lost by today's humans. Today's intellectual world is like a broken mirror, showing partial truth, but showing full picture is its inability.

Moreover, the great dependence on experts has weakened the trust between common sense and ordinary human judgement. This has made the humans passive consumers of experts' opinion. To see the whole picture of human being, specialized knowledge should be brought under human life and values. Humans need people with broader knowledge, along with, ~~and~~ schools and universities that teach students ^{about} thinking broadly and deeply. Above them all, they need to regain ordinary intelligence to solve general problems. Without putting knowledge back together they will be civilization with great knowledge in less domain, and brilliant of a one single field.
