Essay

Topic: Digital Freedom without Digital Responsibility: A new challenge for Pakistani society.

OUTLINE

1.

Introduction

Digital freedom without digital responsibility is a new challenge for Pakistani society. Misinformation and disinformation are shaping public narratives. Destructive criticism, viral trends and deepfake videos are threatening society with defamation, extremism and polarization.

2. Digital freedom without digital responsibility is a new challenge for Pakistani society.

2.1. Posting selective data builds baised narrative in the society.
Case in point: Vaccines of Covid-19 met

backlash in Pakistan because selective data and misinterpreted data about its sideeffects were spread.

2.2. Circulation of misinformation creates doubt and chaos in society.

Case in point: Polio vaccines and associated myths are spread through social media platform.

2.3. Extreme and unbounded opinions making society intolerable.

Case Study of ~~Blephary~~ accusation is Ichra Lahore.

2.4. Deep fake videos defaming officials and respectable members of society.
Case study of AI generated video.

2.5. Unchecked criticism making society polarized.

2.6. Viral trends threatening individual identity.

3. Digital freedom needs to be chained with digital responsibility.

3.1. Allowing freedom of criticism with ~~ethical boundaries.~~

3.2. Discouraging extreme posts with penalties and fine.

3.3. Standardizing authentic channels for valid informations.

3.4. Cyberlaws for deepfake videos and defamation.

3.5. Sharing of opinions checked and monitored.

4. Conclusion.

Digital freedom without digital responsibilities needs to be addressed for curtailing rising extremism and polarization in Pakistani Society.

Digital freedom allows people to share data and criticism without any limitations. However, this freedom may encroach other's freedom. Hence, social contract needs to inculcate digital responsibility for perpetuating equal digital freedom among people, societies and nation. Pakistan is experiencing digital freedom without digital responsibility. Consequently, people are spreading misinformation, disinformation and malinformation without any restrictions. People share selective data, and misinterpret existing data to build false narrative and shape public opinions. This, ultimately, polarize the society. People share derogatory remarks, destructive criticism and extreme beliefs that threaten freedom of minorities and other individuals.

Nevertheless, deepfake videos and false images have escalated the misuse of social media platforms as this can defame anyone without any evidence. Thus, Pakistan needs to

tackle this new challenge with cyberlaws and legislative policies. Pakistan needs to assure digital responsibility among people with penalties, fines and awareness programs. Pakistan needs to inculcate discipline and sense of responsibility for digital freedom among its people with stringent and pragmatic actions.

Digital freedom without digital responsibility is challenging for Pakistan. As posting data without any authentic verification can build biased narratives in the society. People share information and data based on personal experience. Thus, subjective information is unreliable. Moreover, multiple misinformation and disinformation at a time creates chaos and unreliability in the society. Even true information can get questioned among multitude disinformations. For example, Vaccine of Corona virus was highly criticized. People get information and selectively

chose its dangerous and bad perspective to share among people. This selective closing made people avoid vaccine and suffer consequences. Hence, Pakistan needs to address the spreading of disinformation.

Moreover, circulation of misinformation, where people falsify the data and interpret it wrongly, is also a challenge for Pakistan. As Pakistan, for example, is the country among few who is facing cases of polio. The reason is that people has build wrong narrative of polio vaccine. This makes them avoid polio vaccine, ultimately, making their children suffer from disease of polio. Nevertheless, misinformation in politics of Pakistan is also witnessed. People without any hesitation spread wrong information with self created statistics to shape public opinion. Thus, Pakistan needs to curtail the misinformation dilemma in the society.

Adding more to this, extreme
and unchecked opinions also make
society intolerable in Pakistan.

People accuse one another on blasphemy
act without verification and checking.

People accuse one another and use
Islam to defame and criticize others.

Pakistani society is becoming intolerable
to other cultures, identities and

nations. The false narratives and
accusations without any repercussions
are making the digital freedom a big

question. Thus, Pakistan needs to
make legislative measures to eradicate
intolerance from its society.

In a nutshell, misinformation,
disinformation and malinformation,
along with cybercrimes are implications
of digital freedom without digital
responsibility. People feel no emotional,
psychological or logical reasons to
stop themselves from malpractices on
digital platforms. Pakistan needs to

inculcate sense of responsibility among its people with educational and legislative measures. Firstly, educational awareness should be spread about right digital freedom. Next, people should be deterred with legislative laws, punishments and fines. This makes society responsible of their acts and sharing of data. This can make them conscience of spreading information on digital platforms. Thus, pragmatic measures are dire need of contemporary times.
